Real-time SMTP check

99.7% accuracy

BULK EMAIL CHECKER

EMAIL ADDRESS	STATUS	MAIL SERVER	RESULTS
dguedegbe01@gmail.com	PASSED	**IP:** 172.253.116.27 **LOCATION:** US	**The address provided passed all tests.** DISPOSABLE · FREE EMAIL · ROLE ACCOUNT · GIBBERISH · OFFENSIVE

Real-Time Email Verification

Direct live checking against mailservers. No cached data.

99.7% Accuracy

A deep cleaning SMTP handshake provides the highest accuracy.

Mailbox Enrichment

Detects disposables, catch-alls, and free email providers instantly.

Secure & Private

256-bit SSL encryption. We never sell your data.

Why Validate Emails?

Sending to invalid addresses ruins your **sender reputation**. High bounce rates signal to ISPs (like Gmail) that you are a spammer, causing your actual emails to land in the Junk folder.

Our free tool prevents this by:

- ✓ Lowering your Bounce Rate instantly.

How It Works

We don't just check for typos. We perform a real-time **SMTP Handshake** with the recipient's mail server to confirm the user exists.

- ✓ **Smart Syntax Validator** Flags format errors and fixes common typos like "gnail.com" or "outlook.con" instantly.
- ✓ **MX Record Analysis:** Confirms the domain has valid mail servers capable of receiving messages to prevent

BULK EMAIL CHECKER

- **Disposable Email Detector:** Automatically blocks burner addresses, temporary mail services, and fake emails.

Understanding Verification Results

Every email verification returns one of three statuses. Understanding these helps you make informed decisions about your email list.

✓ **Passed** — **SAFE TO SEND**

The email address passed all validation tests and the mailbox exists on the mail server.

Event: `mailbox_exists`

✕ **Failed** — **DO NOT SEND**

The email is invalid and will hard bounce. Remove it from your list immediately.

BULK EMAIL CHECKER

invalid_syntax	Invalid email format
domain_does_not_exist	Domain has no DNS
mxserver_does_not_exist	No mail server found

? Unknown **USE CAUTION**

The result is inconclusive. The server couldn't confirm or deny the address.

is_catchall	Domain accepts all emails
is_greylisting	Server uses greylisting
inconclusive	Temporary error - retry later

Email Intelligence & Enrichment

Beyond simple pass/fail, our verification reveals valuable intelligence about each email address.

BULK EMAIL CHECKER

Burner Email Blocker

Automatically detects and blocks temporary addresses from 10MinuteMail, TempMail, and others.

Free Email Provider

Flags addresses from free providers like Gmail, Yahoo, and Outlook - useful for B2B filtering.

Role Account

Detects generic addresses like info@, admin@, and support@ that are typically managed by teams.

Gibberish Detection

Identifies randomly generated usernames like "asd8f7sd@" that indicate fake sign-ups.

MX Server Enrichment

Returns mail server IP, hostname, geographic location, ISP, and ASN information.

Typo Suggestions

Detects common typos like "gmail.con" and suggests the correct domain "gmail.com".

BULK EMAIL CHECKER

Who Uses Email Verification?

BULK EMAIL CHECKER

Email Marketers

Clean your lists before campaigns to maximize deliverability, protect sender reputation, and reduce ESP costs.

Cold Outreach Teams

Verify prospect emails before sending to avoid bounces that damage your domain reputation.

Developers & SaaS

Integrate via API to validate emails at sign-up, preventing fake accounts and reducing trial fraud.

CRM Administrators

Maintain database hygiene by regularly cleaning contact records and removing dead leads.

Frequently Asked Questions

BULK EMAIL CHECKER

Yes, our email checker allows you to check up to 10 email addresses per day without creating an account or entering credit card details.

How accurate is the verification?

Our real-time verification methods deliver 99.7% accuracy by connecting directly to SMTP servers. We don't rely on outdated stale data lists.

Do you send an email to the user?

No. We perform a "silent" SMTP handshake. We connect to the server, ask if the user exists, and disconnect before sending any message.

Can I verify a list of emails?

Yes, for bulk verification, please create a free account. You can upload CSV spreadsheets to easily verify millions of emails.

What is a disposable email?

A disposable email is a temporary address from services like Temp Mail or 10MinuteMail. These addresses expire quickly and are often used to avoid spam or bypass sign-up requirements. Our tool detects and flags them.

BULK EMAIL CHECKER

A catch-all domain accepts all emails sent to any address at that domain, even if the mailbox doesn't exist. This makes verification inconclusive - we mark these as "Unknown" to protect your sender reputation.

How do I reduce my email bounce rate?

Remove invalid emails before sending. Use our email verification tool to identify mailboxes that don't exist, full mailboxes, and invalid domains. Industry best practice is to keep bounce rates below 2%.

What is email list hygiene?

Email list hygiene is the practice of regularly cleaning your email list by removing invalid, inactive, and risky addresses. This protects your sender reputation, improves deliverability, and reduces costs.

What is a free email provider?

A free email provider is a service like Gmail, Yahoo, or Outlook that offers free email accounts. For B2B campaigns, you may want to filter these out and target only corporate/business email domains.

What is a role account email?

BULK EMAIL CHECKER

What is a gibberish email?

A gibberish email contains a randomly generated username like "asd8f7sd@" or "xkjh2398@". These are often created by bots or users trying to bypass sign-up forms. Our tool detects these patterns automatically.

What is an offensive email?

An offensive email contains profanity, slurs, or inappropriate language in the username. Our tool flags these to help you maintain a professional contact list and avoid sending to potentially problematic addresses. In the real world, this is often a strong indicator of low lead quality.

How do I verify an email address without sending it?

You can verify an email without sending by using an SMTP handshake tool like Bulk Email Checker. We connect to the mail server, confirm the user exists, and disconnect before any message is sent.

Is there a truly free email verifier?

Yes, Bulk Email Checker allows you to verify emails for free daily with no credit card required. It uses the same enterprise-grade accuracy as our paid plans.

BULK EMAIL CHECKER

Yes, our tool connects directly to Google's servers to validate if a specific Gmail address is active, disabled, or non-existent.

Need to verify thousands of emails?

Create a free account to upload CSV files and clean your entire email list.
No contracts. No monthly fees.
